

Evaluation Answer Key - Computer Science & Science

Q1. Explain the process of photosynthesis in green plants.

Model Answer: Photosynthesis is the biological process by which green plants use sunlight, water, and carbon dioxide to produce oxygen and glucose energy.

Q2. What is an algorithm and why is it important?

Model Answer: An algorithm is a step-by-step sequence of well-defined instructions designed to solve a specific problem or perform computation efficiently.

Q3. What is an operating system?

Model Answer: An operating system is system software that manages computer hardware, software resources, and provides common services for computer programs.
